hello world

LOGO

HEADER

Pandoc

- This is more like cli library
- It's possible to convert from Markdown to PDF directly with simple command
- https://github.com/jgm/pandoc

Installation

1. brew install pandoc
2. brew install basictex

Markdown to PDF

- Command : pandoc MAIN.md -o output.pdf

- Pros : It's possible to convert from markdown to pdf directly

- Cons : There's no way to decorate PDF. For example, we can not force title to be located at speicific area. That said, manipulating header, footer is out of concept in this process. If we use html code to fix image size in markdown, for instance, html code will be excluded when converting from markdown to pdf

Markdown to Html & Html -> Pdf

- Command : pandoc MAIN.md -o output.html & pandoc output.html -o output.pdf

- Pros : By manipulating output.html, we can beautify our template to generate PDF.

- Cons : Nothing special. Just two times command.
